# Gain profit with two simple upgrades

## extrusion business

### Upgrade 1

#### Fix Materials Dosing and Blending

- Are you dosing raw materials by volumetric screw feeder, blending offline or mixing by hand?

**You need to be using Gravimetric blending**

- Weigh every gram for total accuracy and consistent blending.
- Real time monitoring.
- Save minimum of 20% on masterbatch and additive consumption.
- Blend accurately with 0.1% all materials – provides flexibility and choice over materials supplies.
- Does not recolour regrind.

### Upgrade 2

#### Improve your yield

- Are you manually controlling your extruder through operator?

**You need to be using loss in weight extrusion control**

- Extrusion Control – weigh every gram of material as it goes into your extruder and control output automatically.
- Automate setup and running of extrusion line – operator simply sets required kg/hr or g/m and the system does the rest.
- Save raw materials – system controls gram/mtr within 0.5% of target
- Faster startups and product changes by as much as 50% less
- Reduce scrap and material wastage highlights and eliminates quality problems
