

ANGEL HAIR TRAPS

Long strands of polymer known as 'angel hair' due to its hair-like appearance, cause major issues in processing plastics.

Clogged filters and processing lines, feed problems and jamming at the throat of the machine are just a few of the problems it creates.

Angel hair traps prevent accumulation saving time and money, by alleviating detangling from blender shafts, un-blocking pipes and bins or poor material flow rates.

Angel hair traps can be mounted just before the take off boxes and provide an effective solution to the problem.

Viewing screens allow you to check for build up of angel hair before removal.

Features:

- Manufactured in aluminium or stainless steel.
- Removable drawer for easy cleaning.
- Manufactured to suit your application.
- Used on base of storage silos or day bins

Day bin box with drawer in open position

Drawer removed with captured angel hair

Silo suction box with angel hair drawer built in
