

# MATERIAL HANDLING

## SELECTION TABLES

SUMMIT SYSTEMS LTD

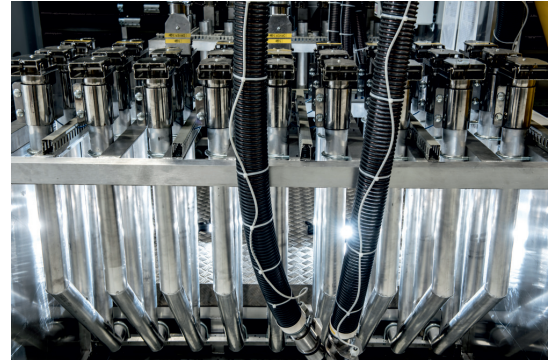

Distribution and Selection Tables are available as part of a system providing the central organisation of your raw material distribution. Summit Systems design and manufacture these tables here in the UK to your exact requirements.

Manual Table

### Benefits

- Eliminates manual shifting of polymer between storage and manufacturing area
- Removes pallets and bags of material from shop floor and enables the use of silo/bulk storage if required
- Reduces the need for fork lift and pallet truck use in the production area
- Promotes good 'housekeeping'
- Reduces dust levels in the production environment due to central filtration
- Eliminates manual lifting of material bags by machine operators
- Eliminates material spillage and wastage
- Power saving – one central vacuum unit replaces multiple vacuum motors
- When integrated with a central dryer eliminates waiting time for dried material

### Features

- Aluminium – for non-abrasive materials
- Stainless steel – for abrasive materials and food grade applications
- Manual and automatic selection with electronic identification PLC
- High performance couplings - quick release for efficient and reliable material changeovers
