

DRYERS

SUMMIT SYSTEMS LTD

MAGUIRE ULTRA

ULTRA is the first ULTRA Low Energy Dryer based on unique technology for use in the plastics processing industry.

Conventional desiccant dryers typically use 100 Watts/kg/hr to DRY material. ULTRA uses just **8 Watts/kg/hr** to DRY.

Switching from desiccant to ULTRA saves you a WHOPPING 91 Watts/kg/hr!

You gain further energy savings by reducing your Global Warming Potential (GWP).

On a process running 100 kg/hr an ULTRA dryer provides savings of 54,120 kW a year. Year on year.

This equates to saving 38.6 tons CO2e each year. That's the equivalent of planting 645 new trees, every year, for 10 years.

ULTRA pays for itself, and with costs so low, it almost runs for free.

Get in touch to switch to an ULTRA today.
